

Electric bus charging

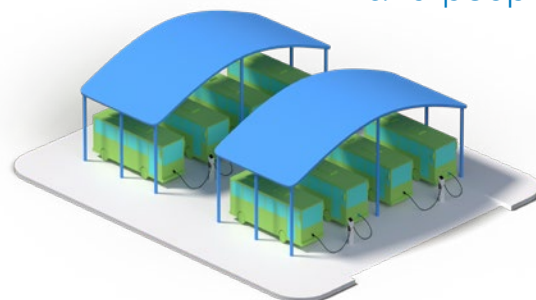

Overnight charging solution at depots

Why electrify your bus fleet?

- To reach carbon goals for transport and combat the climate crisis.
- To improve air quality and noise pollution.
- To create an efficient and sustainable public transport network.
- To reduce costs thanks to electricity prices and maintenance that's both more economical and less frequent.

Take the step towards transport that's friendly to both the environment and people, **go electric!**

Overnight charging solution at depots

Our added value proposal for bus charging

We cover all charging needs at depots for electric buses and minibuses: **in AC (from 22 kW to 43 kW) and in DC (from 25 kW to 150 kW).**

Our 150 kW rapid charge point can **simultaneously charge two electric buses with DC** and can also be adapted for **pantograph charging (Panto Up) or cable reels.**

The Raption series comes with a wide range of benefits owing to its design, both externally (compact, installable near walls, easy and frontal access to chargers, etc.) and internally (modular technology, scalability, high efficiency and uptime, reduced OPEX, etc.).

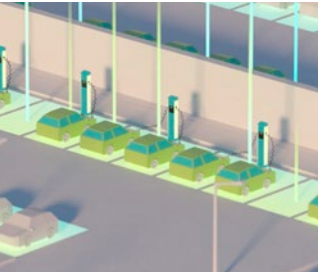

Thanks to the **Master-Slave solution**, multiple charging is more cost-effective when needing to charge multiple buses. A Raption series charger can provide smart

capacities to other slave AC chargers and even 25 kW DC chargers.

The Circontrol solution is complete with **Cosmos**, a cloud-based tool which monitors our chargers in real time, generates reports and sends incident notifications.

The Circontrol solution for electric buses

Charge points	Accessories	Master-Slave	COSMOS
			
Cutting-edge technology with power output of between 22 kW and 43 kW in AC and from 25 to 150 kW in DC.	The Raption series offers pantograph output (Panto Up) and accessories such as cable reels to minimise accidents.	Solution for greater cost-effectiveness for multiple charging.	Cloud platform to monitor users and chargers and generate reports.

We have a solution for you!

You do not have to worry about the project, the installation or the maintenance!
We have a big partner network all over the world that will be in charge of it!
