- **Your presense recognized** by your smartphone's Bluetooth.
- **Remotely activate** your charging session to avoid unwanted use.

## Making EV charging at home easier

Our products have been crafted to address the main problems in home charging.

### Private garage

In a single-family home where contracted power is shared with other appliances, dynamically adjusting the EV's consumption to avoid outages is a must.

**Our sensor Home BeON** achieves it without increasing the contracted power.

### Condominiums

In shared car parks, where communications may be weak, being able to manually lock the charger is a key point. This feature, among many others such as the tethered cable option or the beacon light displaying the charger status, improves the user experience.
